

We've taken the meaning of "GOING GREEN" literally!

Now our **LEAD FREE** expansion compensators really show their true color....they are green! This reflects our commitment in everything we do within the Guardian Engineering & Manufacturing family of companies to keep the environment safe. Look for the change starting in September.

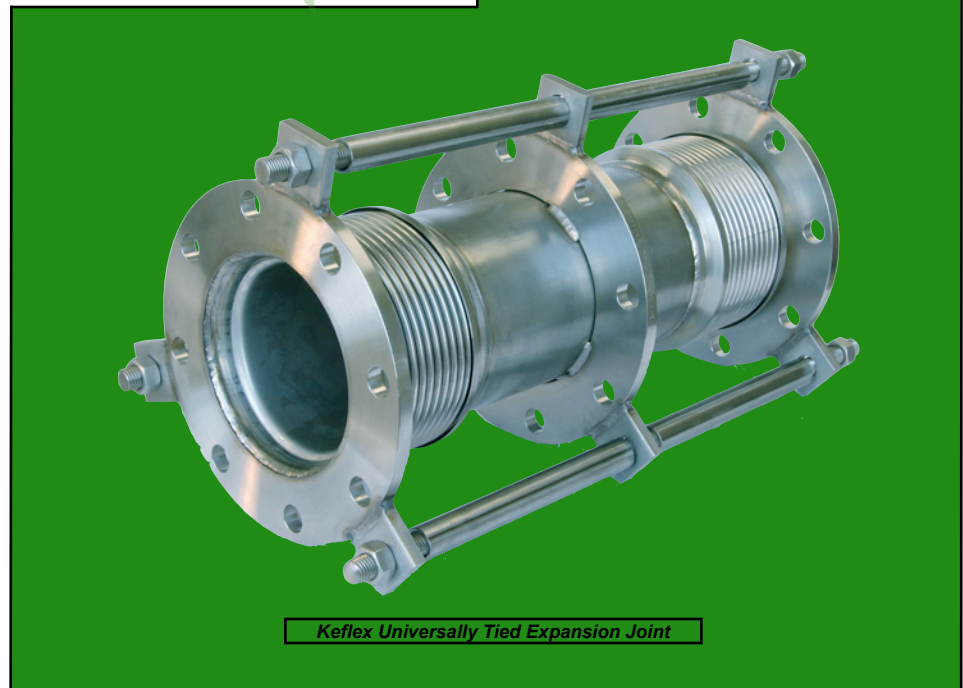

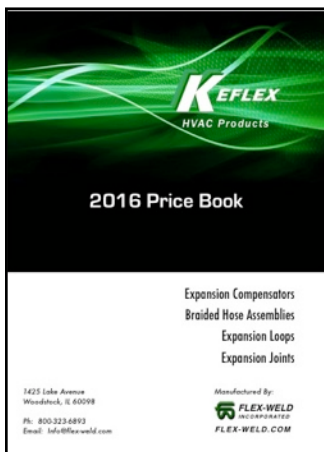

PRODUCT SPOTLIGHT

Universally Tied Expansion Joints are assemblies that incorporate two or more bellows. Having multiple bellows in an assembly gives the joint the ability to handle a combination of lateral, angular and axial movements. Tie rods and /or limit stops are generally incorporated to control the motion in the assembly. This also serves to support longer assemblies.

As with the majority of our products, we can provide a variety of materials for these expansion joints.

2016 PRICING

New pricing has been released and will go into effect in August. We have done our best to keep things in line with the market and to keep our products competitively priced. If you have not yet received the pricing please contact Stephanie and let her know.
